

PORTFOLIO — DRAWING SET AK-01

Parametric design, drawn to production.

Technical product design for modular furniture — building the parametric libraries, catalogs, and design-to-manufacturing pipelines that turn a spec into a finished module.

NAME Ashokkumar	TITLE Sr. Product Designer — Technical	LOCATION Madurai, Tamil Nadu	REV. Dec 2025
CORE TOOLS IMOS · Coohom	DATA / ERP PowerShell	FOCUS Design → Manufacturing	SHEET 01 / 01

A-01 Profile

Senior Product Designer with strong expertise in parametric design, R&D, and technical problem-solving. Skilled at improving operational efficiency and delivering innovative product prototypes from concept to production. A collaborative, detail-oriented professional committed to continuous improvement in the design process.

8+ yrs in Modular Furniture, Cabinetry, Millwork

B.E. Mechanical Engineering, 2014–2018

Based in Madurai, Tamil Nadu

A-03

Experience

□ DEC 2025 – PRESENT

Senior Product Designer — Technical

Prominence Homworks

- Built and maintained the parametric design library and product database on IMOS and Coohom.
- Managed integration between Coohom and IMOS, ensuring a seamless design-to-manufacturing workflow.
- Trained the team on tools and production processes to support consistent output.
- Developed cutlist formats through PowerShell scripting to support ERP system files.
- Provided technical support on hardware and construction-related requirements.

□ AUG 2022 — DEC 2025

Senior Product Designer — Technical

Livspace

- Facilitated incorporation of multiple tools and created a catalog of KWS products using IMOS.
- Collaborated on development of front-end and back-end components.
- Supported the design and creation process of new product prototypes.
- Investigated and resolved recurring problems through a thorough RCA process.
- Designed advanced solutions through the application of parametric modeling in IMOS.
- Addressed production and site challenges to maintain operational continuity.

□ 2018 — 2022

Draughtsman

Farwood Industries Pvt Ltd

- Developed detailed floor plan drawings to streamline production processes.
- Compiled essential data to support architectural design processes.
- Adapted KWS products to meet unique requirements.
- Enhanced efficiency through optimal material utilization.

A-04 Selected Work

Six sheets are in. One slot left — swap it for your next render, catalog spread, or production shot whenever you're ready.

SHEET 01

Parametric Wardrobe & L-Corner System

A modular wardrobe with a fully configurable internal layout — shelves, drawers, and accessories driven by article variables, so one product definition covers multiple shutter and dimension options instead of duplicating near-identical variants. Extended the same logic to L-corner units, with parametric sizing and support accessories built into a single module.

IMOS

Article Variables

Parametric Modeling

SHEET 02

Parametric Shutter Design Library

Built a library of shutter styles — arched, fluted, radiused, and mixed-panel — each driven by dynamic sizing and its own machine-tool configuration in IMOS, with every new pattern run through the full shutter-integration test before release.

IMOS

Machine Tooling

Design QA

SHEET 03

ERP Report Builder Redesign

Rebuilt the cutlist and purchased-parts report used on the production floor — reorganizing dimension, finish, and article data into a clearer layout in Report Builder, tightening a format the team reads on every job.

Report Builder

ERP Data

SHEET 04

Coohom-to-IMOS Construction Method

Reconstructing Coohom-approved visual designs as fully parametric, dimensionally exact models in IMOS — matching the reference render, then building the real carcass, shutters, hardware, and shelving underneath so what the client saw becomes a production-ready product, not just a picture.

Coohom

IMOS

Parametric Modeling

PART	TYPE	L × W × T (MM)	QTY	POS #
Top Shelf Rail	Carcass	563.6 × 75 × 18.2	1	1100
Left Side Panel	Carcass	700 × 580 × 18.2	1	1100
Right Side Panel	Carcass	700 × 580 × 18.2	1	1100
Back Panel	Carcass	677.6 × 577.6 × 18.2	1	1100
Drawer Fascia	Shutter	159 × 598 × 18	1	1100
Finger Groove Patta	Carcass	70 × 600 × 18	1	1100

SHEET 05

Production Cutlist Automation

Scripted the panel-level cutlist export IMOS feeds into the ERP — every carcass and shutter panel broken out with final dimensions, edge-banding, material code, and a position/barcode number the factory scans on the line. Rows above are pulled from a real 3-drawer base unit export.

- IMOS
- PowerShell
- ERP Integration

↓ Download cutlist (CSV, 42 KB)

SHEET 06

Design-to-Manufacturing Drawing Set

Took a high-value residential project from design through to manufacturing — a 130-sheet production set spanning every room, each floor plan and elevation carrying its own cabinet position numbers straight through to the cutlist. Worked with the design team and the onsite installation crew to confirm construction details before the set was cleared for production.
